

Summer 07

Practice News

We are very excited our building work for onsite staff accommodation is now completed.

The accommodation will allow one veterinary surgeon, one on call nurse and one EMS student to be on site.

The new annex also has created a common room for the staff for meetings and relaxation during their lunch hour.

A new vet joins us later this month. Ben Price graduated from Glasgow University.

Ben is moving in with his four snakes later this month!!

Grass seeds

Grass seeds are a menace this time of year.

They can get every where!!

Already this year we have had them up noses, inhaled into lungs, stuck in eyes, and most commonly tracking into the paws.

If you detect a swelling or discharge in your pets feet this should alert you to the possibility of a grass seed.

Fleas

Fleas love the warm weather and multiply at a rate of knots.

We supply only the best quality products and our trained nurses are happy to give you free advice about your flea protection.

Fly strike in rabbits

Please be careful.

Flies can lay their eggs on your rabbit and these can hatch into maggots that eat into the skin.

We supply a product called rearguard that can prevent this horrifying condition.
